You can restrict users to their own contents using the new update for the [Roles](#) feature in LMS. This feature allows restricting new contents that are created on or after April 15, 2016. All other contents created before this date cannot be restricted due to the nature of granular permissions.

Roles comes with 2 different permissions for courses, contents, tests, and live classes.

Shared

This is the default option and it allows everyone with 'super admin, and 'teacher' user type or users with specific permissions to see each others content.

Courses

Create a course

Courses

Shared

Shared option allows all users to see each others content.

Restricted

This option permits restricting users to see only their own content.

Courses

Create a course

Courses

Shared

Restricted

Restricted option does not show other users content, and restricts to users own content.

You can edit existing Role and change these options or create a new one.
